Summary

Backend engineer for identity systems and developer platforms, working in Go, Rust, and TypeScript. 3.5 years of experience, full-time since July 2024. Primary role is customer identity at LoginRadius. EnvSync is a concurrent product. Author of two individual IETF Internet-Drafts on OAuth push-device discovery and CIBA binding.

Experience

Software Engineer, LoginRadius — July 2024 – Present

- Ship agentic IAM, MCP authentication, DPoP, and CIBA on LoginRadius customer identity and access management (CIAM), including B2B single sign-on and authorization.
- Author of individual Internet-Drafts on OAuth push-device discovery and CIBA binding.
- Led enterprise CIAM integrations. Wrote the TypeScript and Go SDKs, docs, and reference apps that unblocked customer engineering teams. Docker, Datadog, and GitLab CI.

Founder and Product Architect (concurrent), EnvSync — Jan 2025 – Present

- Multi-tenant secrets platform: Bun and Hono API, Go CLI, React dashboard, and TypeScript and Go SDKs. Open source and enterprise editions in one Turborepo.
- miniKMS in Go: per-tenant envelope encryption (HKDF, AES-256-GCM), a 3-level public key infrastructure (PKI), and a hash-chained audit log over gRPC.
- Enterprise edition: OpenID Connect (OIDC) and SAML single sign-on, OpenFGA authorization, secret rotation, dynamic secrets, and GitHub Actions pull.

Founding Engineer (concurrent), Engineer's Cradle — July 2024 – May 2025

- Concurrent with LoginRadius. Set CI/CD and code-quality standards and cut onboarding time by about 40%.
- Built Rust machine-to-machine authentication (99.9% uptime) and a Go GraphQL gateway (P95 latency down about 30%). GitHub Actions pipelines raised deploy frequency by about 10x.

Backend Developer, SaaSDen — June 2023 – Nov 2023

- Built Node.js APIs, identity and access management (IAM) integrations, and deployment workflows for the SaaS product.

Site Reliability Engineer, SharpSell — Feb 2023 – Apr 2023

- Cut the monthly AWS bill by 76% ($19K to $4.5K) by moving workloads from EC2 to ECS with blue-green deploys.

Software Engineer Intern, Hybr1d — July 2022 – Dec 2022

- Migrated the backend from Ruby on Rails to TypeScript (REST, GraphQL, Node.js, PostgreSQL, Hasura).

Projects

oauth-impl — June 2026 – Present

- Self-hosted OAuth 2.0 and OpenID Connect (OIDC) issuer in Go: authorization code with PKCE, device code, CIBA, pushed authorization requests (PAR), DPoP, mutual TLS (mTLS), token exchange, and dynamic client registration.

Chabi — Sept 2025 – May 2026

- Redis-compatible server in Rust (RESP, snapshots). 4-vCPU benchmark: 35.6k ops/s versus Redis at 12.3k and DiceDB at 15.7k. GET p50 0.07 ms versus Redis 0.27 ms.

Skills

Languages: Go, Rust, TypeScript, Python, Bash
Systems: gRPC, GraphQL, REST, PostgreSQL, Redis, Docker, Bun, Hono, GitHub Actions, GitLab CI
Identity: OAuth 2.0, OIDC, SAML, SSO, CIBA, DPoP, PAR, mTLS, OpenFGA, envelope encryption, KMS
Cloud: AWS (ECS, EC2, ECR, S3, CodePipeline), Cloudflare, Datadog, Prometheus, Grafana, Keycloak

Education

Lovely Professional University, B.Tech in Computer Science (Cybersecurity) — June 2020 – June 2024

- Certifications: CPTS (Hack The Box, 2024), CEH v12 (EC-Council, 2024).
